

PANHAREACH PHAT

Backend Software Engineer

Phnom Penh, Cambodia • +855 81 654 606 • panhareach.phat.2050@gmail.com • [linkedin.com/in/panhareach-phat](https://www.linkedin.com/in/panhareach-phat)

PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 4+ years of experience architecting and shipping scalable, secure server-side systems across e-commerce, healthcare, CRM, and AI-driven enterprise products. Specialized in PHP (Laravel, Symfony, PrestaShop), Python, (Django, Flask) and Node.js (Express, Nest, Fastify), with deep expertise in REST API design, PostgreSQL/MySQL optimization, Redis-backed caching, and Docker-based deployment. Proven track record of leading engineering teams, mentoring developers through code reviews, and translating business requirements into reliable production systems with measurable impact.

TECHNICAL SKILLS

Languages: PHP, Python, JavaScript, TypeScript, SQL, Node.js, Java, Dart

Frameworks: Laravel, Symfony, PrestaShop, Fastify, Express.js, Django, Flask, Spring Boot, Flutter

Databases & Caching: PostgreSQL, MySQL, Redis, Prisma ORM

APIs & Integrations: REST, JSON, OpenAI APIs, SelectLine CRM, third-party SDKs

DevOps & Tooling: Docker, Git, CI/CD pipelines, Linux, deployment automation

Practices: REST API design, RBAC, design patterns, performance tuning, code reviews, technical mentoring

AI Agents: Cluade Code, Cursor, Windsurf

PROFESSIONAL EXPERIENCE

Lead Software Engineer

Jan 2024 – Present

BiKay — Phnom Penh, Cambodia

- Lead backend architecture and design for multiple enterprise products, aligning technical solutions with business objectives and delivery timelines.
- Build and maintain server-side systems in PHP (Laravel, Symfony) and Node.js (Fastify, Express), focusing on scalable APIs, secure data models, and optimized database access.
- Conduct regular code reviews, mentor team members, and enforce engineering standards across the team to improve code quality and delivery velocity.
- Manage deployment pipelines and partner with DevOps to streamline production releases, monitoring, and incident response.
- Collaborate with product, frontend, UI/UX, and QA stakeholders to convert requirements into well-tested, documented, production-ready features.

PrestaShop Developer (concurrent role)

Jan 2026 – Present

BiKay — Phnom Penh, Cambodia

- Develop customized PrestaShop modules for the ZZ Racing E-commerce Motorshop storefront.
- Integrate PrestaShop with SelectLine CRM to synchronize inventory, orders, and customer data in near real time.

Freelance Backend Developer

Jan 2023 – Dec 2023

Multiple Companies — Remote

- Delivered backend systems across multiple client projects, including a Real Estate Management System, an HRMS, and a CMS.
- Translated business requirements into production-ready REST APIs, data models, and admin tooling under tight delivery timelines.

Open Source Contributor

npm & Packagist — Remote

Jan 2022 – Present

- Maintain a small set of utility libraries published on npm and Packagist, used by other developers in the PHP and Node.js ecosystems.

SELECTED PROJECTS

Business AI App — Backend Engineer 2025

- Built the backend powering an AI-driven business analytics platform supporting CV matching, project offers, and chatbot functionality.
- Integrated OpenAI APIs and NLP pipelines to automate resume parsing and recommendation logic, reducing HR manual workload by ~50%.
- Designed scalable embedding and semantic-search workflows, enabling recruiters to surface ideal candidate matches quickly and accurately.
- Helped position the company for AI-powered enterprise sales, contributing to interest from key clients.

EWS Knowledge Transfer App — Backend Engineer 2024 – 2025

- Developed and maintained the backend with Laravel, Redis, Docker, and PostgreSQL, powering real-time knowledge transfer for enterprise users.
- Implemented Redis-based caching and asynchronous processing pipelines, improving data synchronization efficiency by ~30% and cutting downtime during team handovers.
- Delivered a scalable architecture supporting both real-time collaboration and secure long-term data storage required for enterprise adoption.

WHO Patient Management System — Backend Engineer 2024

- Designed and deployed a secure, scalable patient management platform handling 10,000+ patient records across multiple healthcare centers.
- Implemented role-based access control (RBAC) so each healthcare professional only accessed data relevant to their role, improving compliance and patient privacy.
- Optimized database queries to cut data retrieval times by ~40%, enabling medical staff to access records with minimal delay.
- Added systemwide data validation and integrity checks, reducing inconsistencies in health data reporting.

Placodist — Backend Engineer 2025

- Led the initial backend development phase using Node.js, Fastify, Prisma, and PostgreSQL, balancing performance with maintainability.
- Designed modular, extensible code structures and conventions so future engineers could build on the framework with minimal friction.

Huoutracco eCRM (Cambodia & Laos) — Backend Engineer 2025

- Contributed backend features to an enterprise CRM deployed across Cambodia and Laos, supporting customer data management, sales tracking, and reporting.
- Improved system scalability for multi-region adoption and strengthened data consistency and access management across user roles.

EDUCATION

Bachelor of Computer Science

Cambodia Academy of Digital Technology — Phnom Penh, Cambodia
